Project Title: Dailey Drive Sewage Lift Station Replacement

Description:

The project consists of the construction of a new sewage lift station in northern Mitchell at the intersection of 407th Avenue and North Harmon Drive. The lift station will replace the nearby Dailey Drive lift station, which will be converted into a flow through manhole. The project includes extension of a six-inch force main to the new lift station site.

The Dailey Drive lift station, which was installed in 1997, has a number of design deficiencies that hinder its operation and maintenance, including lack of a trash basket in the wet well, pump isolation and check valves that are difficult to access and are unsafe for operation, and pumps that are inadequately sized for current and future needs. For these reasons, and the fact that the lift station is located in the yard of a residential property, it has been determined that rehabbing the structure in its current location is impractical.

The Applicant Certifies That:

I declare and affirm under the penalties of perjury that this application has been examined by me and, to the best of my knowledge and belief, is in all things true and correct.
